

H160

Hand-held infrared thermograph

The handheld thermography camera, specially designed for temperature measurement in transformer substation. It's equipped with a 160×120 resolution thermal detector. It helps the staff to quickly find the fault according to accurate temperature measurement of high temperature targets in the environment. Meanwhile it provides assistant decision and ensure safety. The device is mainly applied to various industries, such as Building, HVAC, and auto industry, etc.,

Key Features

- 160 × 120 resolution
- 320 × 240 resolution 2.4" LCD display
- Built-in rechargeable Li-ion battery
- Up to 8 hours continuous running
- Thermometry D:S = 75:1, a circular target with a diameter of 1 cm can be measured accurately within a distance of 75 cm.

Functions

Thermography

Device detects the real time temperature, and display it on the screen.

Storage

Device is equipped with replaceable memory card to store recorded captured snapshots, and important data.

Palette

Device supports 4 palettes

Laser Light Supplement:

Long-distance laser light supplement to point the thermography target.

High quality images

Shell is made of iron oxide, which can shield the external radiation and electromagnetic interference; With high temperature measurement consistency: the temperature difference between any two points is less than 0.5K
